## MACHOOOS PORTABLE ONLINE ALBUM

A few years ago, one of our dearest customer asked an interesting question,

How to save an album as a portal.?

A very interesting question so we thought about it too?

And then we came up with a great idea of Portable online album.

We understand the importance of being able to access your memories and special moments from anywhere in the world, which is why we offer portable online albums.

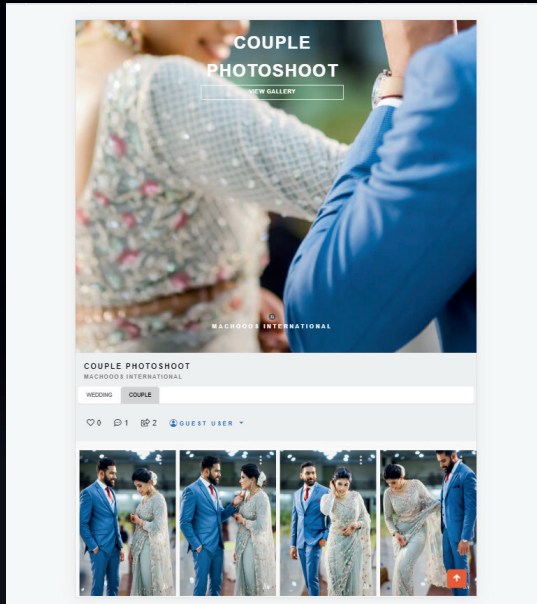

With just a login name and password, customers can view their precious moments on our user-friendly intuitive platform. With this, we have aimed to create an immersive and engaging experience for our users that replicates the familiar sensation of flipping through a traditional photo album. Through careful design and user testing, we have developed this platform that allows users to easily and intuitively navigate through their photos, creating a sense of exploration and discovery. Users can quickly search for specific images, or take their time browsing through their collection, just as they would with a physical photo album.

This means that customers can easily share their memories with friends and family, no matter where they are in the world, and without worrying about the risk of damage or loss. We are committed to continually improving our platform to ensure that users can relive their memories in the most enjoyable and meaningful way possible.

## AI FACE RECOGNITION

Consider you are attending your best friend's celebration event as a guest. And the photographer there captures the best pictures of you. How can you access that? It will either be sent to you by the photographer or by the friend. Regardless of the response, it is a headache. How can we quickly resolve this?

It might be challenging for both the photographer and the clients to find the picture of an event attendee among the thousands of pictures that were taken by the photographer during the event. We generally adopt two options for obtaining photographs: copying them onto a pen drive or sharing them through Google Drive with guests who have come to collect them. Otherwise, guests must either reach out to the photographer or wait for the customer to send them.

We realize that this is a difficult task. Face recognition technology by using artificial intelligence can be a great solution for finding the images of event attendees from thousands of photos taken by the photographer. Through AI, we can easily analyze and match facial features, even from blurred or partially visible images, to accurately identify individuals and retrieve their pictures. This can save time and effort for both the photographer and guests, and ensure that everyone can easily access and enjoy their event photos.
